3	Copper Busbar Arrangement (300 mm ²)	As per Specification
4	CTS-400/5A	4

- In addition to above, any other item required in PPMC-DS-01:2026.
- 4.3 The MDM interface of PITC shall be used initially. In case of development of LESCO's own MDM in future, the integration of supplied MDC will be carried out by the bidder within the warranty period of MDC. If LESCO adopts a new MDM system that follows the same UDIL protocols and architecture, the integration process should be straightforward. However, the bidder will be required to: Ensure smooth integration of MDC data with the new MDM system, which may include mapping data fields, ensuring consistent communication protocols, and addressing any potential system compatibility issues. It means that during integration vendor application and database must not crash or become non-responsive. Similarly, vendor UDIL API and MDC must be capable to handle bulk requests.
- The bidder(s) provided MDC software will have perpetual license and will be bound to upgrade its installed MDCs with the latest release of PITC-UDIL (available at <https://pitc.com.pk/index.php/projects/open-architecture-based-ami>). It is clarified that any update/change in UDIL release related to hardware/firmware will not be the part of bidder's scope.
- 4.4 Communication module used in Smart Metering Controlling Device (SMCD) must be verified and approved by Pakistan Telecommunication Authority (PTA). It should be minimum 4G and must be downward compatible to 2G (4G/2G) without changing the SIM. If communication fails at higher band, then the communication module shall automatically switch to lower available band.
- 4.5 Since all of the APMS component will be housed inside a steel cabinet / enclosure, the smart metering unit needs to be capable of communicating over the network without signal degradation. The DLMS / COSEM compliance requirements certificate includes the encryption mechanisms. The supplier must ensure the offered meters model are on DLMS / COSEM compliance certificates. The suppliers are encouraged to provide the DLMS / COSEM compliance certificate not older than "one year's" version. The security of data being sensitive in nature must be ensured. The successful bidder is responsible to maintain all measures to secure meter software, HES/MDC Application, Databases, network from cyber security attacks. Next Generation Firewall/UTM, IDS/IPS, EDR etc should be included in network designing for safeguarding the infrastructure. While LESCO will provide the infrastructure and ensure security at the infrastructure level, the bidder is responsible for securing the application and databases at the software level. This includes: Application Security: The bidder must ensure the application is not vulnerable to

- common security threats by adhering to best coding practices, implementing necessary security patches, and regularly testing the software for vulnerabilities especially DDoS attack prevention for both MDC and UDIL API. Data Encryption Where Required: During deployment, the bidder must ensure that application-to-database connections are encrypted where required. Additionally, data at rest may also need to be encrypted based on the project's requirements. Ongoing Security Measures: The bidder should ensure that the application remains secure against potential vulnerabilities, even after deployment, by keeping up with the latest security updates and patches.
- 4.6 Vendor will provide complete hardware/VM's specifications (Cores, RAM, Storage, etc.) mutually agreed for HES/MDC deployment at LESCO/PITC Data Center, to support all of APMS devices stated in BOQ. MDC should have the capability to retain minimum 120 days data in its database, before moving to archive.
- 4.7 The PITC-UDIL compliance Tier-I certificate on latest version is mandatory and the bidder shall submit it within 30 days after the issuance of notification of award / letter of acceptance and obtain UDIL compliance Tier-1 Certificate from PITC within 30 days (from the submission of compliance requirements for Tier-1 (extendable if both parties agreed). The bidder can also obtain the same certificate at any bidding stage before issuance of PO. The UDIL Compliance testing will comprise of two phases /Tiers as under:
- 4.8 UDIL compliance testing Tier-1 Certificate:
In this phase MDCs will be tested for latest UDIL Compliance as per request Performa submitted by Vendors. After successful completion, UDIL Compliance testing Tier-1 certificate will be issued by PITC.
- 4.9 UDIL Performance Testing Tier-2 Certificate:
Tier-2 Certificate will be issued by committee headed by Chief Engineer (PIU) LESCO whereas Concerned XEN M&T, Concerned S.E (OP) and Manager MIS LESCO will be members of the committee, once 100% APMS are installed and their two successful months of monitoring cycles including fulfilment of all on demand operation on these installed APMSs have been performed by the LESCO using the AMI solution. LESCO will issue Tier-2 Certificate within 30 days after fulfilment of all requirement.
- 4.10 The communication security is critical between APMS and MDC because the data may go through public network (where the security and the integrity of the data could be compromised) even in private network (where there are possibilities of intrusions that can corrupt and manipulate data). Main reason for secured communication is sensitive data read from or sent through the APMS (e.g., consumption of electrical units). Therefore, the successful bidder will ensure the appropriate security scheme implemented upto MDC. The bidder will be required to provide documents mentioning the mechanism for implementing security of data from APMS to MDC. The vendor will provide the certificate as per PITC format as under:
"It is to certify that primary and derived electrical quantities from MDC schematic to UDIL schematic will be without any treatment. If any discrepancy is identified, the vendor will be held responsible for the damages caused due to malfunctioning of APMS along with

revalidation of UDIL certificate or cancellation of UDIL as per decision taken jointly by LESCO & PITC.”

- 4.11 The successful bidder will be responsible for provision of secure and authorized access of software functionalities in the APMS, security of software programming and re-programming in the field and will provide necessary backup warranty and training to officers/officials of LESCO
- 4.12 Bidder will ensure that date/time of SMCD, synchronized on every connectivity with MDC. Also the MDC date/time will be synchronized with Network Time Protocol (NTP) on real time basis. PITC will provide NTP server.
- 4.13 Successful bidder(s) is/are required to provide facility / gadget for data retrieval for downloading through APMS optical port. In case of damage of APMS unit, LCD / Display wash, any critical issue, the security of EEPROM must be ensured and data should be readable from EEPROM. In this regard the bidder shall provide read only software on CD / DVD along with essential accessories to LESCO PIU office. Each SMCD should have unique password. The list of SMCDs along with their password should be provided to M&T offices upon delivery and installation of APMS units in LESCO.
- 4.14 Data consumption shall not exceed 32 MB per month in keep-alive mode.
- 4.15 MDC must be capable to handle all number of awarded APMS concurrently.
- 4.16 MDC should be able to support retrieval of scheduled metering data as per programmed / configurable interval (e.g 15 Minutes) for APMS. APMS would be declared muted if the last successful read was before 12 hours. Number of such muted units shall not be more than 2% at any point up to the warranty period within the system. MDC should be able to retrieve all missing data /reads from APMS after restoration of supply /elimination of communication error /due to any reason without compromising system performance also issues regarding error in data or missing data shall be treated as mute APMS. LESCO will provide details where APMS are to be installed subsequently the SIMs will be provided on the basis of field survey performed by bidder for best network availability on all APMS. Missing Read means Missing of schedules and on demand data. Error in data means incomplete/wrong data receiving at MDC. This will be checked through MDM as vendor's MDC will be available to expose data at MDM.
- 4.17 The successful bidder is required to configure APMS during production for primary & secondary IPs, ports & Wakeup SIM numbers (which will be provided by LESCO/PITC). By default, **optical port will be disabled**, the APMS will be in “Keep Alive” Mode and after energizing, these APMS will be automatically connected with the MDC & provide required data as per latest UDIL specifications. However, the schedule communication interval as well as sampling rate must be configurable.
- 4.18 On demand reading should be retrieved and the response time of On Demand reading should not be more than two minutes or any other realistic frequency set by LESCO.
- 4.19 In case of delay of retrieval of on Demand readings beyond two minutes, an investigation shall be conducted into the matter and reasons other than the transformer damages, scheduled load shedding, TELCO issues etc., shall be on Bidder's liability. The APMS should communicate at Signal Strength of -90dBm to -105dBm. Vendors will get it tested also to the satisfaction of the LESCO. If it is
