Section VI. Terms of Reference

1. Background

Area Electricity Board (AEB) Quetta was one of the eight AEBs constituted through amendments in WAPDA Act during 1981. Later on, Government of Pakistan under the Power Sector Restructuring Program approved revamping of WAPDA power sector, resultantly twelve corporate entities were formed including Eight Distribution Companies (DISCOs), one National Transmission and Dispatch Company (NTDC) and three Generation Companies (GENCOs). All these companies have been incorporated under Companies Ordinance 1984.

Quetta Electric Supply Company Limited (QESCO) is a Public Limited Company (The Company) incorporated in Pakistan, under repealed Companies Ordinance, 1982 (now the Companies Act, 2017). The Company was incorporated on 25th April, 1998 and commenced commercial operations 01st June, 1998. The Company is principally engaged in the distribution and supply of electricity within the license area granted by the National Electric Power Regulatory Authority (NEPRA). The registered office of the company is situated at QESCO Headquarters, Zarghoon Road Quetta.

The main objective of the company was to acquire/take over those properties, rights, and liabilities of Pakistan Water and Power Development Authority (WAPDA) comprising of administrative division formally known as the Quetta Area Electricity Board (AEB) and to carry on, expand and extend the business activities.

2. Objective(s) of the Assignment

Due to multiple factors, including higher electricity tariffs from grid supply and unreliable service caused in part by Aggregate Technical & Commercial (AT&C) losses, there has been a rapid increase in the adoption of distributed generation (DG), particularly solar panels, across Pakistan. While this trend supports energy access and sustainability goals, it also presents significant financial and technical challenges for electric power distribution companies.

To support the continued integration of solar distributed generation (DG) systems without undermining the financial viability or technical stability of distribution companies, the company intends to commission a comprehensive study through an independent consultant or consulting firm. The study will focus on:

*a) **Financial Impact** - assessing the effects on utility revenues, cost recovery mechanisms, and the implications for the current tariff structure;*

*b) **Technical Impact** - evaluating the influence of DG on network performance, reliability, and the condition of distribution assets; and*

c) Policy and Regulatory Review - examining existing policies and regulatory frameworks, identifying gaps, and providing actionable recommendations to enable the safe, reliable, and sustainable integration of distributed generation.

3. SCOPE OF SERVICES:

A) Technical Assessment

Analyse the current penetration levels and spatial distribution of distributed generation (DG) systems across different consumer categories (residential, commercial, industrial). Identify and evaluate technical challenges associated with DG integration, including:

- i) *Hosting capacity at feeder, transformer and phase levels*
- ii) *Creation of maps for future DG Installations*
- iii) *Voltage fluctuations and limit violations*
- iv) *Reverse power flow and associated protection coordination issues and accelerated asset aging*
- v) *Increased transformer loading and accelerated asset aging.*
- vi) *Power quality disturbances (e.g., harmonics, voltage flicker, etc.)*
- vii) *Impacts on load forecasting accuracy and dispatch planning*
- viii) *Current interconnection practices and recommend revisions following IEC Standards.*
- ix) *Real time generation tracking and system diagnostics*

Assess the adequacy and effectiveness of existing interconnection standards and protocols for DG systems, and propose necessary updates or revisions to align with current and projected integration levels.

Propose practical and cost-effective technical solutions to support seamless DG integration, such as advanced inverter functionalities, targeted grid reinforcements, deployment of energy storage systems, and implementation of smart grid technologies.

B) Financial & Economic Impact Analysis

- i) *Evaluate the financial impact of increasing DG penetration on utility revenue streams and assess challenges related to cost recovery and fixed cost allocation.*
- ii) *Analyse the effects of DG Integration on existing tariff structures, including the dynamics of cross-subsidization among consumer categories and the financial implications of mechanisms such as net metering.*
- iii) *Estimate potential revenue losses under multiple DG penetration scenarios (low, medium, high), taking into account projected growth in consumer adoption and technology costs.*

- iv) *Propose innovative financial tools and policy instruments to facilitate equitable cost-sharing of DG-related infrastructure upgrades and to monetize grid-support services provided by distributed energy resources.*

C. Policy and Regulatory Framework Review

- i) *Examine current policies, regulations, and licensing conditions related to DG integration, including those established by NEPRA, PPIB, and individual distribution licensees. Identify areas of alignment, gaps, and inconsistencies.*
- ii) *Benchmark global best practices in DG integration, including interconnection standards, net metering, compensation mechanisms, and utility business model adaptations, with a focus on applicability to the local context.*
- iii) *Propose targeted revisions to interconnection codes, net metering regulations, and tariff design frameworks to enhance the safe, equitable, and financially viable integration of distributed generation within the national grid.*

D. Off-Grid Solar PV Installations and Utility Impact

- i) *The study shall also assess the challenges associated with off-grid solar PV installations and their broader impact on utility operations, planning, and revenue.*
- ii) *The final report shall be developed with a balanced approach that safeguards the interests of all stakeholders, including utilities, consumers, regulators, and private sector participants-while promoting efficiency, transparency, and fair competition in the energy market.*

E. Stakeholder Impact Assessment of Solar PV Penetration

- i) *The study shall comprehensively identify and evaluate the advantages and disadvantages of increased Solar PV penetration for all key stakeholders. These include the utility, distributed generation (DG) system owners/installers, non-DG consumers, the national exchequer, and other relevant market participants.*
- ii) *The assessment will adopt a balanced and objective approach, ensuring that the benefits and potential drawbacks are fairly analysed from multiple perspectives.*
- iii) *The goal is to provide actionable insights that support informed decision-making while promoting equitable outcomes, grid stability, and long-term sustainability of the power sector.*
